Author Index Volume 136 (2001)

Al-Kurdi, A., see **Mittal, R.C.** 1– 15
Aziz, T. and **M. Kumar,** A fourth-order finite-difference method based on non-uniform mesh for a class of singular two-point boundary value problems 337–342

Beneš, M., see **Šembera, J.** 163–176

Chan, E.S. and **B.H. Ong,** Range restricted scattered data interpolation using convex combination of cubic Bézier triangles 135–147
Chang, S.-L., see **Chien, C.-S.** 199–218
Chen, H. and **B.D. Shizgal,** A spectral solution of the Sturm–Liouville equation: comparison of classical and nonclassical basis sets 17– 35
Chien, C.-S., S.-L. Chang and **Z. Mei,** Tracing the buckling of a rectangular plate with the Block GMRES method 199–218
Chipot, M., R. March and **D. Vitulano,** Numerical analysis of oscillations in a nonconvex problem related to image selective smoothing 123–133

Fan, M., see **Jiang, D.** 189–197
Ferrando, S.E. and **L.A. Kolasa,** Averages of best wavelet basis estimates for denoising 357–367
Ferreira, J.A., F. Patrício and **F. Oliveira,** A priori estimates for the zeros of interval polynomials 271–281

Hagler, B.A., d-fold Hermite–Gauss quadrature 53– 72
Han, W. and **M. Sofonea,** Time-dependent variational inequalities for viscoelastic contact problems 369–387
Herceg, Đ., see **Petković, M.S.** 283–307

Iannelli, M. and **F.A. Milner,** On the approximation of the Lotka–McKendrick equation with finite life-span 245–254

Jiang, D., M. Fan and **A. Wan,** A monotone method for constructing extremal solutions to second-order periodic boundary value problems 189–197

Koepf, W. and **D. Schmersau,** On a structure formula for classical q-orthogonal polynomials 99–107
Kolasa, L.A., see **Ferrando, S.E.** 357–367
Korman, P., Monotone approximations of unstable solutions 309–315
Kozánek, J., see **Mazúch, T.** 219–226
Kumar, M., see **Aziz, T.** 337–342

Lamberg, L., K. Muinonen, J. Ylönen and **K. Lumme,** Spectral estimation of Gaussian random circles and spheres 109–121
Liang, X.-Z. and **M.-C. Liu,** Solving second kind integral equations by Galerkin methods with continuous orthogonal wavelets 149–161
Liu, M.-C., see **Liang, X.-Z.** 149–161
Lumme, K., see **Lamberg, L.** 109–121
Lupiañez, F.G., Continued fractions and order-preserving homeomorphism 255–258

March, R., see **Chipot, M.** 123–133
Mazúch, T. and **J. Kozánek,** New recurrent algorithm for a matrix inversion 219–226
McCartin, B.J., Exponential fitting of the delayed recruitment/renewal equation 343–356
Mei, Z., see **Chien, C.-S.** 199–218
Milner, F.A., see **Iannelli, M.** 245–254
Mittal, R.C. and **A. Al-Kurdi,** Application of the Cramer rule in the solution of sparse systems of linear algebraic equations 1– 15
Muinonen, K., see **Lamberg, L.** 109–121

Ogreid, O.M. and **P. Osland,** More series related to the Euler series 389–403
Oliveira, F., see **Ferreira, J.A.** 271–281
Ong, B.H., see **Chan, E.S.** 135–147
Osland, P., see **Ogreid, O.M.** 389–403

Pao, C.V., Numerical solutions of reaction–diffusion equations with nonlocal boundary conditions 227–243
Park, J.-H., A new delay-dependent criterion for neutral systems with multiple delays 177–184
Patrício, F., see **Ferreira, J.A.** 271–281

PII: S0377-0427(01)00514-3

Petković, M.S. and **Đ. Herceg,** Point estimation of simultaneous methods for solving polynomial equations: a survey 283–307

Sadkane, M., A note on normal matrices 185–187
Schmersau, D., see **Koepf, W.** 99–107
Šembera, J. and **M. Beneš,** Nonlinear Galerkin method for reaction–diffusion systems admitting invariant regions 163–176
Shizgal, B.D., see **Chen, H.** 17– 35
Sofonea, M., see **Han, W.** 369–387
Sofronov, I.L. and **W.L. Wendland,** Exact linear far-field conditions for three-dimensional aerodynamic stationary transonic flows 317–335
Vitulano, D., see **Chipot, M.** 123–133

Wan, A., see **Jiang, D.** 189–197
Wazwaz, A.-M., The numerical solution of fifth-order boundary value problems by the decomposition method 259–270
Wendland, W.L., see **Sofronov, I.L.** 317–335

Ylönen, J., see **Lamberg, L.** 109–121

Zhou, P., Multivariate Padé approximants to a meromorphic function 37– 51
Zhu, D., A family of improved secant methods via nonmonotone curvilinear paths technique for equality constrained optimization 73– 97
